

## TimeVue™ Full Management Software

TimeVue Full is an enhanced version of TimeVue Lite. TimeVue Full offers many useful features for companies with more complicated time & attendance or human resource needs. With TimeVue Full you have the power to group your employees and print reports specific to each supervisor. Extended calculation rules allow advanced features such as shift differentials and complicated overtime rules to be easily defined. Multiple-levels of security allow supervisors to access the system – but only view their employees' data.

With TimeVue Full you extend your time system to include human resource tracking. In one system you can track performance reviews and attendance notes, accrue and allocate sick and vacation time, and track off-site hours such as training, and education credits.

TimeVue Full includes all the features of TimeVue Lite, as well as the following enhancements:

- Automatic benefit accruals – accrue and track 3 user-definable benefits, such as vacation, sick, and personal time
- Customizable reporting – group and sort employees in various combinations
- Customizable overtime
- Supports pay differentials
- Software security allows you to determine what supervisors can see or edit
- Deliver custom messages to employees when they clock in/out
- Prints company-wide messages on employee time cards
- Employee memos allow unlimited note and documentation tracking (performance reviews, attendance records, salary history, etc.), for each employee
